

# XaaS Anything as a Service

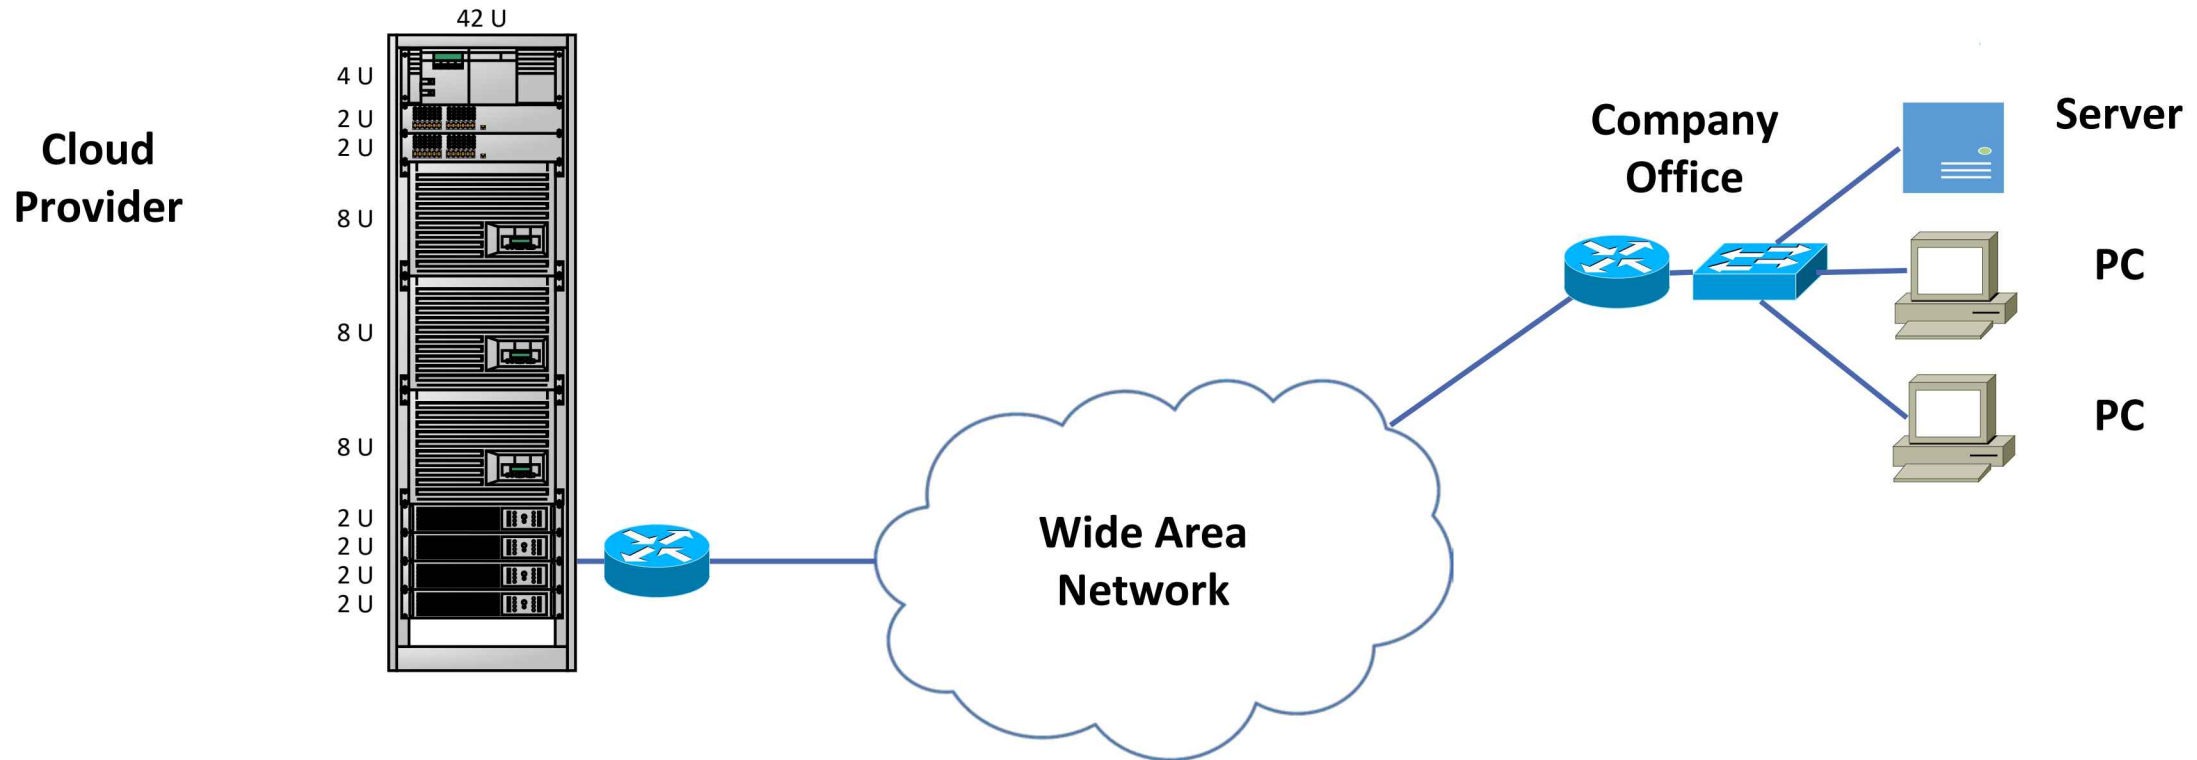

- Many cloud providers also offer other 'as a Services'
- These are sometimes described as XaaS 'Anything as a Service'
- Examples include:
- DaaS Desktop as a Service
- DRaaS Disaster Recovery as a Service
- BaaS Backup as a Service
- Storage as a Service
- And many more

# BaaS Backup as a Service

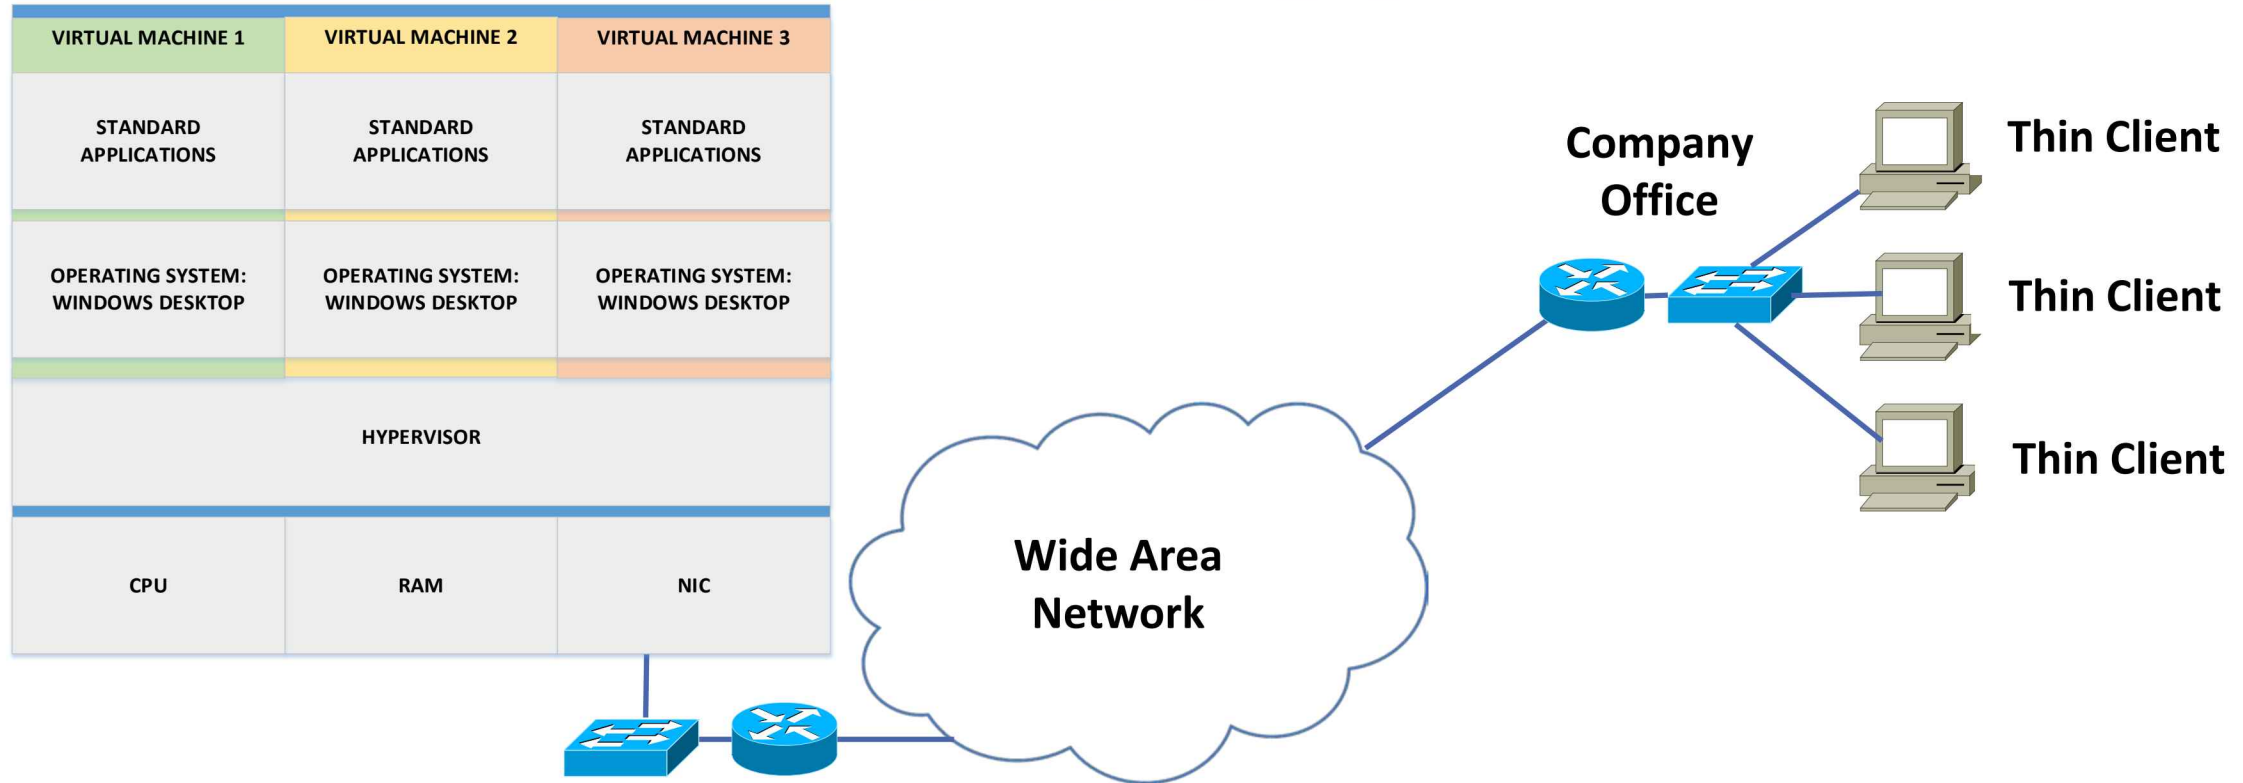

- Data is backed up from Company Office to storage at Cloud Provider

# DRaaS Disaster Recovery as a Service

- This is an active/standby model
- The customer has a traditional On Premises deployment with minimal infrastructure provisioned at the Cloud Provider
- Data is replicated from Company Office to Cloud Provider storage
- Infrastructure can be quickly provisioned at Cloud Provider if customer experiences disaster at Company Office

# DaaS Desktop as a Service

- DaaS is an implementation of Virtual Desktop Infrastructure where the VDI server infrastructure is hosted by the cloud provider.

# Storage as a Service

- Amazon S3
- Dropbox
- Microsoft OneDrive
- Google Drive
